

Liberty Desktop Client

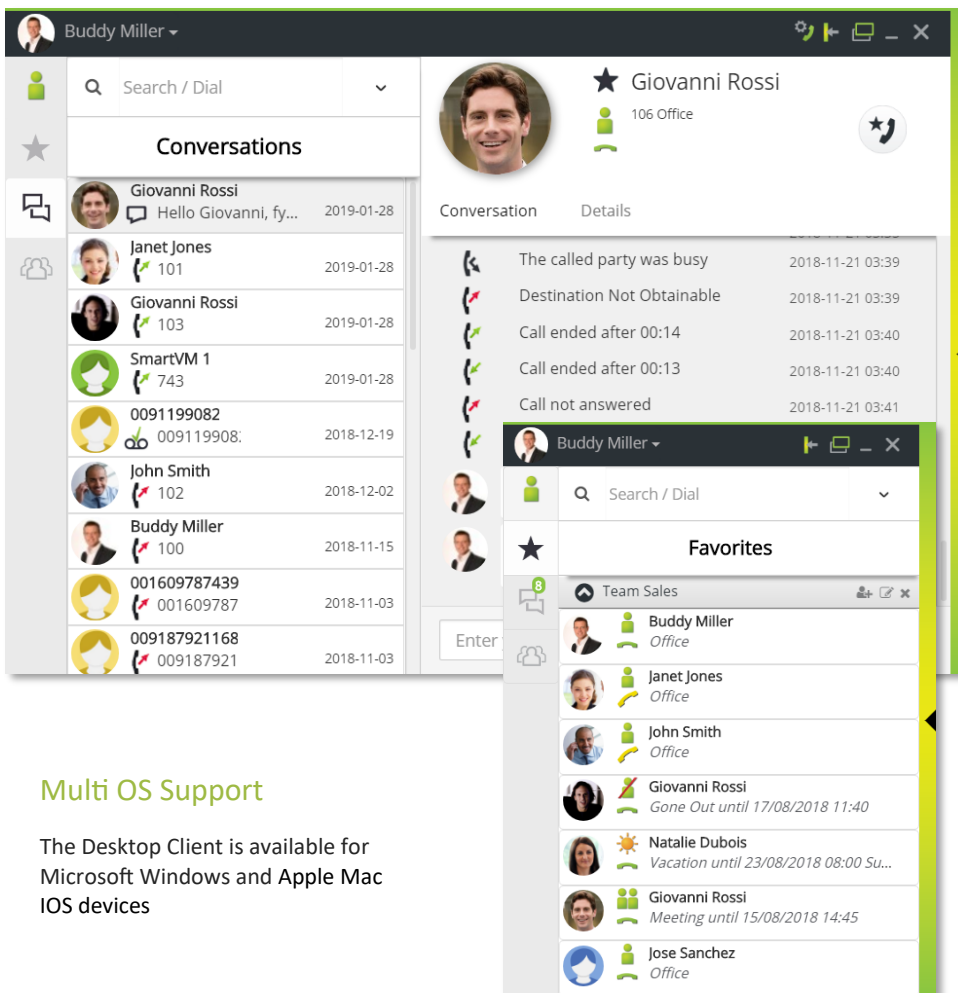

Softphone for the Liberty Communications Platform

The Desktop Client connects via the Internet to the Liberty Communications Platform and brings full business desk-phone functionality to your Windows desktop, laptop or Apple Mac. It can be configured to act as your only business extension or pooled in a personal extension group with your desk or mobile phone. It is ideal for remote and home workers who need a simple mobile workstation arrangement with minimal fuss. A good Internet/WiFi connection is the only prerequisite and there is no requirement for a VPN!

Liberty Desktop Client ^{MPAW}

The Liberty Desktop Client is a modern softphone for the Liberty Communications Platform that adds full telephony functionality to your desk or laptop device.

Multi OS Support

The Desktop Client is available for Microsoft Windows and Apple Mac IOS devices

Call Control

Extensive telephony call control features (e.g. Call, Answer, Transfer, Attended Transfer, Consult, Conference, Deflect, Toggle, Mute & Do Not Disturb)

Number Continuity

Deploy the Desktop Client as a user's primary device or twin it with a desk-phone. All of your devices can operate in a personal group and share your business phone number

Directories

Seamless integration with the Liberty Internal Directory, Speed Dial List, Global External Directories, Personal Directories, Outlook Contacts and Imports

Presence

Control your presence (eg. Office, Meeting, Sick, Break, Gone Out, Vacation, Lunch, At Home & Do Not Disturb)

Conversations

Historical Journal for tracking call and voicemail events
